

Little Miami Gig is bringing fiber optics to Washington Township!!!!

Owner, Dett Hunter created Little Miami Gig after spending 20+ years asking current providers to upgrade services in Harlan Township, and it never happened. He and his team are dedicated to bringing fiber optics to meet the needs of rural families in Ohio.

Little Miami Gig fiber optics will help families by:

- ❖ Improving connectivity of cell phones to WIFI, not having to depend on tower location and eliminating tree interference
- ❖ Supporting all forms of TV entertainment through streaming, eliminating satellite to avoid storm interference
- ❖ Providing internet for home, work, school, security, gaming, etc

Service plans can be viewed at www.littlemiamigig.com and click on "Service Plans".

Little Miami Gig is currently building on Route 22/3 from Middleboro down to Strout Road, then down to SR 380.

Building on SR 350 will begin in about 3 weeks, then on to intersecting roads.

Little Miami Gig will be working with Washington Township Officials and ODOT for permits to bury fiber under St. Rt. I-71 at the end of Lincoln to access the Southwestern portion of the township.

A new Data Center is being built on SR 380 in Clinton County that will service the township.

Fiber is built in loops for dependability out from the data centers and starts on the main state and county roads. **All roads** will be built so understand if your road is passed, it does not mean service is not coming.

Little Miami Gig does not market or advertise but grows by referral. Crews are all employed locally and are there to help and answer your questions.

If you are interested in fiber service to your home, that meets and exceeds today's needs as well as serves future demands please go to: www.littlemiamigig.com and click on "service request".
